APNEP's Wetland Monitoring & Assessment Phase I (2008-2010) and Pre-Phase II (2011-2016)

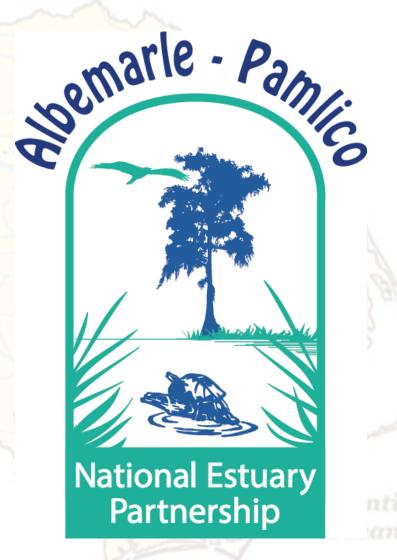

Dean Carpenter Albemarle-Pamlico National Estuary Partnership

Wetlands Monitoring & Assessment Workshop Imperial Centre for Arts and Sciences 22 February 2017

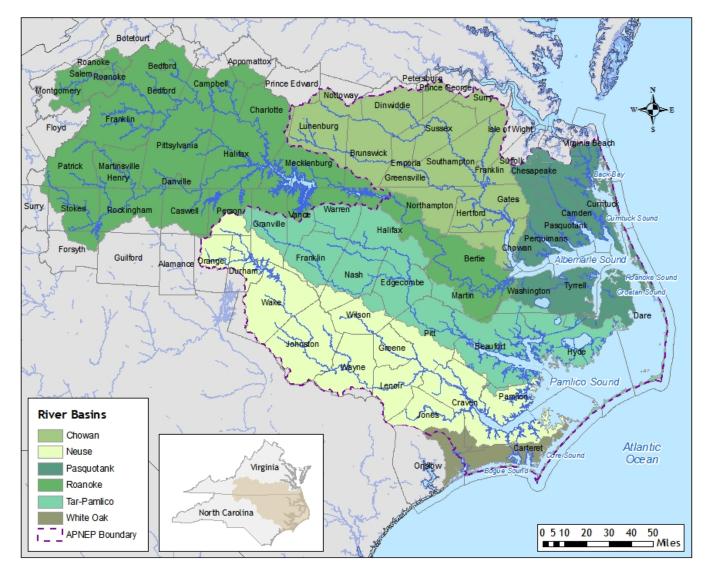

APNEP Mission

"To identify, restore, and protect the significant resources of the Albemarle-Pamlico estuarine system."

APNEP Implementation Area and Management Institutions

APNEP Wetland Resources Monitoring & Assessment (Phase I)

- Develop a monitoring strategy for Wetland Resource metrics within the APNEP region
- Metric-specific monitoring proposals
- Indicators to be featured in the 2012 APNEP Regional Ecosystem Assessment

APNEP's Transition to Ecosystem-Based Management

- A holistic vision and plan that includes a comprehensive description of the A-P system and articulation of multiple management objectives.
- A community that has effective engagement of policy makers, managers, scientists, & stakeholders.
- A process that includes effective adaptive management to address a changing system.
- A framework that includes appropriate authority, implementation area, management institutions, financial resources, and effective communications.

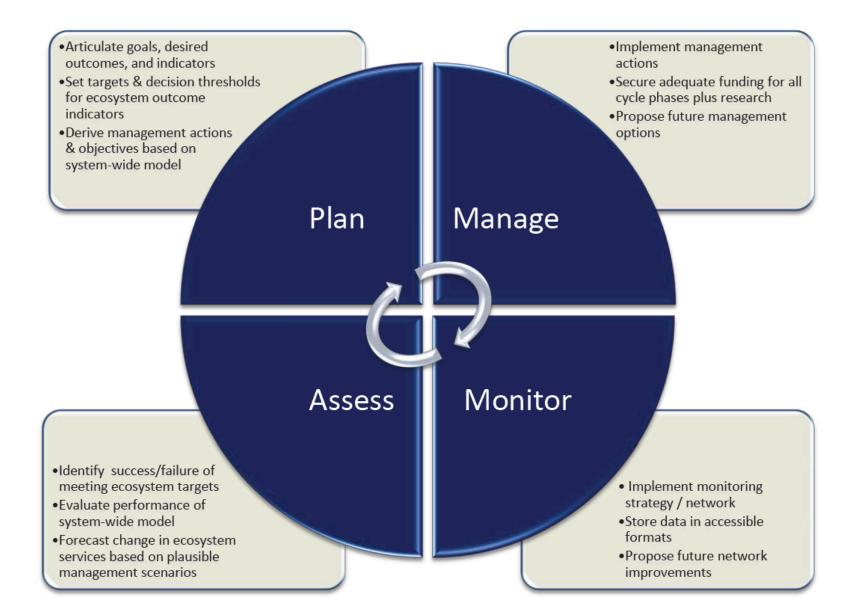

APNEP's Ecosystem Health Goals

- A region where human communities are sustained by a functioning ecosystem
- A region where aquatic, wetland, and upland habitats support viable populations of native species
- A region where water quantity and quality maintain ecological integrity

Figure 2: APNEP's adaptive management cycle.

APNEP Targets 2017-2018

- Regional Ecosystem Assessment 2.0
 - Indicator Specification 1.1
- Comprehensive Conservation & Management Plan (CCMP) 2.1
 - Ecosystem-Based Management (EBM) Plan 1.0
- Integrated Monitoring Strategy 1.0
 - Indicator Specification 1.1

APNEP Monitoring & Assessment 2008-2010

- APNEP staff adopt indicators/metrics in 2007
- Plan in 2008 to develop an integrated monitoring strategy for those indicators
- In concert with APNEP revising its Comprehensive Conservation & Management Plan (CCMP)
- Six APNEP resource monitoring & assessment teams

provide for

research value

APNEP Indicator Definition

"A numerical value derived from actual measurements of a pressure, state or ambient condition, exposure, ecological condition, or measure of human health or wellbeing over a specified geographic domain, whose trends over time represent or draw attention to underlying trends in the condition of the environment in the A-P region."

APNEP Indicator Criteria

- Utilization: Address a key process or property, and answers (or makes an important contribution toward answering) an important question about conditions in the A-P region
- Objectivity: Developed and presented in an accurate, clear, complete, and unbiased manner
- Integrity: Underlying data should be characterized by sound collection methodologies and data management systems adequate to protect its integrity, and to comply with quality assurance procedures
- Availability: Data should be available and timely, or will likely be available in the future, to maintain the indicator's utility
- Representation: Trends should accurately represent the underlying trends in the target population
- Clarity: The indicator should be clearly defined and reproducible. The specific data used and the specific assumptions, analytical methods, and statistical procedures employed are clearly stated

A-P Ambient Monitoring Program

- Precise goals and specific measures for monitoring policy effectiveness should be designed and tested at the time that a policy is implemented
- Status Quo: APNEP 2000 monitoring survey update

APNEP Monitoring Proposal

- Justification for indicator
- Goal of sampling/monitoring program
 - What the optimum sampling/monitoring program will achieve and why that is important
- Existing sampling/monitoring program
 - Objectives What the existing program is designed to measure.
 - Example: Conduct periodic aerial mapping to monitor dramatic change of SAV presence over 5-year increments in four of six APES regions
 - Methods
 - Costs
 - Data quality control (data quality objective)
 - Data analysis, statistical methods and hypotheses

APNEP Monitoring Proposal

- Enhanced sampling/monitoring program
 - Objectives what the enhanced sampling/monitoring program is designed to measure.
 - Example: Estimate the areal distribution and abundance of SAV along the western shorelines of APES and be capable of detecting significant change in SAV distribution and abundance
 - Methods
 - Costs
 - Data quality control (data quality objective)
 - Data analysis, statistical methods and hypotheses
- Reference(s)
- Contact Person

Monitoring Integration Continuum

- Independence: Knowledge of partners monitoring strategies
- Cooperation: Taking advantage of common geography, timing
- Collaboration: Opportunities to leverage partners' monitoring networks
- Integration: Working toward a common set of regional ecosystem objectives

APNEP EBM Transition Team

Policy Board Science & Technical **Advisory Committee** Citizens Advisory Committee State Planner Federal Planner **EBM Tech Transfer** Staff

Step 1: Articulate program goals

- Objectives Hierarchy Structure
 - Goal-Objective-Management Action-Step (1994)
 - Goal-Subgoal-Objective-Management Action (2008-2010)
 - Goal-Outcome + Component-Objective-Action (2012)
- Objectives Hierarchy Content
 - Five Goals, 15 Objectives, 49 Actions (1994)
 - Three Goals, 12 Outcomes + 5 Components, 15 Objectives, 58 Actions (2012)

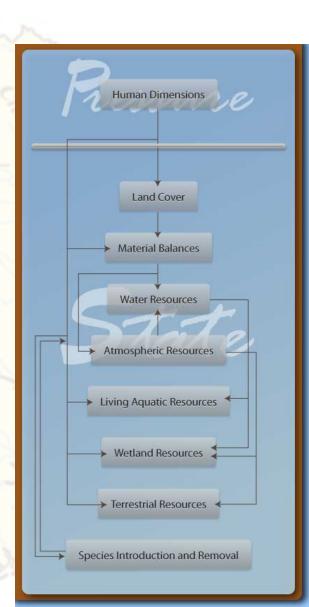

Step 2: Develop system level model for goal attainment

Ecological management actions (stressor mitigation) can impact multiple ecosystem endpoints

Multiple stressors (including other endpoints) impact directly and indirectly ecosystem endpoints

			Goal 1: human o	support	fish/game	access	sustained	Goal 2: habitats paquatic	wetland	upland	estuarine fr	eshwater upl	and	hydrologic	quantity and quality nutrients and		iden	ti prote re	stor preve

I ESLUARY Progra																			

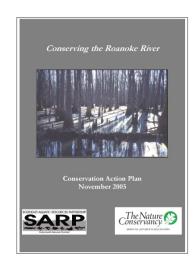

EBM Step 3: Assess current management

efforts -identify gaps

- Directed by conceptual models
- Survey of partners' strategic/action plans
 - Specificity and publication date
 - Action extraction
 - Align with APNEP outcomes/strategies
 - Interview senior management

Implement CCMP

- Fourth CCMP question
- Ten-year horizon
- 58 CCMP actions
- Super-Aggregated into five components
- Aggregated into 15
 CCMP objectives

2b. The extent and quality of upland, freshwater, estuarine and near-shore marine habitats fully support biodiversity and

ecosystem function

Outcomes			Actions			Workgroups
1a	A1.1	B1.1	C1.1	D1.1	E1.1	Freshwater Habitats and Fish Passage

		B3 3	C/L 3	-		

C4.4

C5.1

C5.2 C5.3

Step 5: Develop monitoring program

- Linking candidate indicators to CCMP outcomes
- Indicator-specific monitoring strategies
 - Justification for indicator
 - Goal of sampling/monitoring program
 - Existing sampling/monitoring program
 - Enhanced sampling/monitoring program
 - Reference(s)

Integrated monitoring strategy

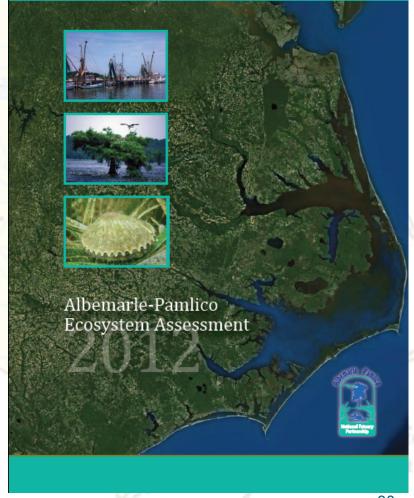

Step 6: Assess performance

- "Interim" regional ecosystem assessment (2012)
 - Select provisional indicators
 - Status & trends from 1995 to present
 - Heinz Center format
- Phase 2 assessment
 - Diagnosis
- Phase 3 assessment

Albemarle-Pamlico National Estuary Partnership

APNEP Ecosystem Assessment Coasts, Sounds, Near Marine: Extent & Pattern

- Phragmites australis
 - Why Is the Extent of the Wetland Plant Species *Phragmites* australis Important?
 - What Will This Indicator Report?
 - What Do the Data Show?
 - Why Can't This Entire Indicator Be Reported at This Time?
 - Discussion
 - Technical Notes

Assessment Planning

 "The greatest challenge in developing a large-scale biogeographic assessment is the synthesis and subsequent analysis of spatial data collected at different scales for varied objectives."

Source: NOAA 2003, citing Gotway and Young 2002

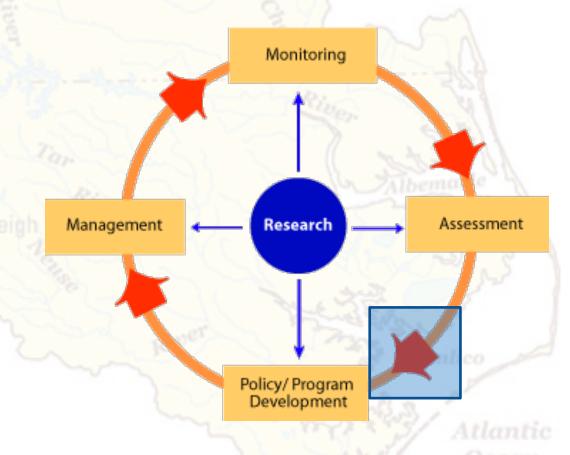

Bioregional Assessment Questions

- What were historic ecological, social, and economic conditions, trends, and variability?
- What are current ecological, social, and economic conditions?
- What are trends and risks under current policies and management?
- What policy choices will achieve ecological sustainability consistent with social well-being?
- What are the implications of these choices?
 Source: Erman (1999)

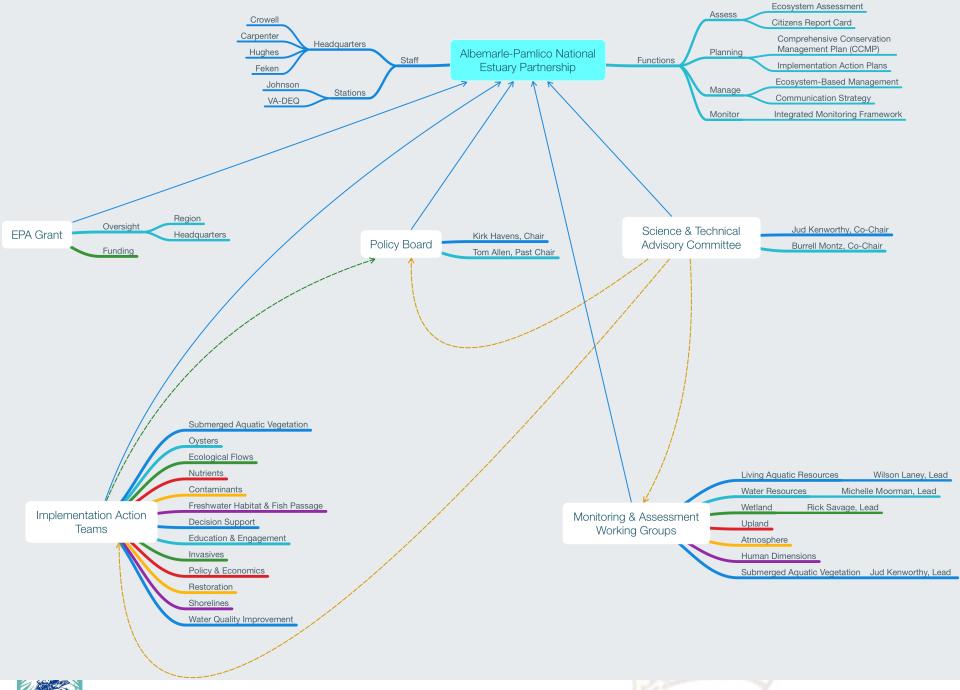

Step 7: Manage adaptively

- Most difficult step?
- Senior management engagement
- Trigger levels in plan

Atlantic Ocean

Indicator Planning Decisions

- What indicator(s) map to each environmental outcome?
- What are the fair, good, and excellent health target values for each ecosystem outcome indicator?
- What is the expected trajectory of an indicator value, based on how CCMP actions are implemented?
- What is the "trigger" value for a given interval since action steps are implemented, outside of which means the system is not behaving as forecast and change in business (e.g., research, revised action step, partner commitment) is required?

CCMP's Four Questions

- What is a healthy Albemarle-Pamlico Estuarine System?
- What is the status of Albemarle-Pamlico Estuarine System?
- What are the biggest threats to Albemarle-Pamlico Estuarine System?
- What actions should be taken that will move us from where we are today to a healthier Albemarle-Pamlico Sounds by 2022?
